

737-700/800 正常检查单

海南航空

飞行前

氧气测试,100%
导航转换和显示电门正常,自动
风挡加温接通
增压方式选择器自动
飞行仪表
停留刹车
发动机起动手柄切断
RVSM
(RVSM 每个主高度表与机场标高误差不大于
75FT)
两主高度表比较-标高在0至5000英尺误差≤50
英尺
标高在 5001 至 10000 英尺误差≤60 英尺
起动前
し 文会
飞行文件齐全
驾驶舱门关紧并锁好
燃油
旅客信号接通
驾驶舱侧窗锁好
MCP V 2、航向、高度
起飞速度 V1、VR、V2
起飞前 CDU 输入完成
方向舵和副翼配平灵活和 0
滑行和起飞简令完成
防撞灯接通
N= 4= V.
滑行前
发电机全接通
探头加温接通
防冰
组件自动
隔离活门自动
发动机起动电门连续
再现检查
自动刹车RTO

B737-800 机体触地极限

B737-800 Ground Contact Limitation

后机身触地的俯仰姿态极限	停放状态	11°
Pitch Attitude Limit of the Aft	Parking Condition	
Fuselage Ground Contact	着陆状态(坡度 0)	9.2°
	Landing Condition (0 bank)	
擦机翼、发动机的坡度极限	13° (以典型的	5 姿态接地)
Wingstrike, Engine Bank Limit	13° (touchdown with ty)	pical attitude of 5°)

注: 1、以 Vref 加任何阵风修正的着陆速度,接地仰角为 4-6°, 每低于 Vref5Kt, 姿态增大 1°。延长拉平将增加机身姿态 2-3°。

Note: 1. Touchdown with the landing speed of Vref + any gust correction and $4-6^{\circ}$ pitch. Increase pitch for 1° with every 5Kt below Vref. Extension of flare will increase $2-3^{\circ}$ of pitch.

- 2、着陆姿态的减小、离地高度的增加、使用着陆襟翼越小,则擦机翼的 坡度增加。
- 2. Bank of wingstrike will increase with less landing pitch attitude, higher altitude above ground, and less landing flaps.

B737-700/800 侧风起降风标准(单位:海里/小时)

B737-700/800 Crosswind Limitations for Takeoff and Landing (knot)

	90°侧风	45°侧风	顶风	顺风
	90° Crosswind	45° Crosswind	Headwind	Tailwind
干跑道	30(15米/秒)	35(18米/秒)	50(25米/秒)	10 (5米/秒)
Dry Runway	30 (15 m/s)	35 (18 m/s)	50 (25 m/s)	10 (5 m/s)
湿跑道	23(12米/秒)	30(15米/秒)	50(25米/秒)	6 (3 米/秒)
Wet Runway	23 (12 m/s)	30 (15 m/s)	50 (25 m/s)	6 (3 m/s)
结冰、积冰/雪	15 (8米/秒)	20(10米/秒)	50(25米/秒)	6 (3 米/秒)
Runway with Ice	15 (8 m/s)	20 (10 m/s)	50 (25 m/s)	6 (3 m/s)
Ice Accumulation				
/Snow				

在滑溜跑道上,侧风能力取决于道面条件、飞机载荷和飞行员的技术。

Crosswind capability on slippery runway depends on runway condition, aircraft load and pilot skill.

B737-700/800 自动着陆风标准(单位:海里/小时)

B737-700/800 Wind Limitations for Autoland (knot)

	顶风	正侧风	顺风
	Headwind	Vertical Crosswind	Tailwind
737/8 (700/800)	25(13米/秒)	20(12米/秒)	10 (5米/秒)
	25 (13 m/s)	20 (12 m/s)	10 (5m/s)

着陆风修正标准(海里/小时)

WIND CORRECTION FOR LANDING (KNOT)

- 一、使用自动油门着陆时, V目标=Vref+5, 不做风值修正。
- 1. When autothrottle is used for landing, Vtarget = Vref+5, wind correction not necessary.
- 二、使用人工油门着陆时, V目标=Vref+风值修正值。
- 2. When manual throttle is used for landing, Vtarget = Vref+ wind correction.

风修正值=1/2 稳定顶风分量+ (阵风值-全稳定风值)

Wind correction = 1/2 constant headwing component + (gust component – full constant wind component)

注:风速单位为海里/小时(1米/秒 \approx 2海里/小时);

Note: Wind speed – knot (1 meter/second \approx 2 knot);

风修正值最大为 20Kt, 最小为 5Kt;

Maximum wind correction is 20Kt and minimum is 5Kt;

风向以着陆跑道方向为基准。

Wind direction is based on the landing runway direction.

- 三、当按照非正常检查单调整着陆速度时,如不使用自动油门,则必须对风进 行修正(方法同二)。
- 3. When landing speed is adjusted according to the abnormal checklist, wind correction must be made if autothrottle is not used. (Refer to 2 for wind correction calculation)

(空白) (BLANK)

无增压起飞(UNPRESSURIZED TAKEOFF)
APU 不工作的时候进行无发动机引气起飞或着陆时:
Takeoff or land without engine bleed when APU is not running:
起飞(TAKEOFF)
组件电门自动
Pack switchAUTO
隔离活门电门关闭
Isolation valve switchOFF
发动机引气电门
Engine bleed switchOFF
起飞后(AFTER TAKEOFF)
注:如发动机失效,在达到 1500 英尺或越障高度时才接通发动机引气电门。
Note: In case of engine failure, switch on engine bleed till reaching 1500 feet or obstacle
clearance altitude.
在不低于 400 英尺的高度和达到机场标高以上 2000 英尺之前:
At or above 400 feet and before reaching 2000 feet above landing elevation:
2号发动机引气电门开
No.2 engine bleed switch
当机舱爬升率指示器稳定时(when CABIN rate of CLIMB indicator stabilizes):
1号发动机引气电门开
No.1 engine bleed switch
隔离活门电门自动
Isolation valve switch
无发动机引气起飞(TAKEOFF WITHOUT ENGINE BLEED)
APU 工作的时候进行无发动机引气起飞或着陆时:
Takeoff or land without engine bleed when APU is running:
起飞(TAKEOFF)
注:如滑行时需要防冰,起飞前把飞机设置为"无发动机引气起飞"构型。
Note: If anti-ice is required during taxing, airplane should be configured as "takeoff without
engine bleed" before takeoff.
注:如滑行时不需要防冰,可在发动机起动后把飞机设置为"无发动机引气起飞"构型。
Note: If anti-ice is not required during taxing, airplane may be configured as "takeoff without
engine bleed" after engine start.
右组件电门
Right pack switch
隔离活门电门
Isolation valve switch OFF
左组件电门
Left pack switch
1号发动机引气电门
No.1 engine bleed switchOFF APU 引气电门开
ACU 71 LPU 1
APU bleed switchON

配半空气电门开
Trim air switchON
起飞后(AFTER TAKEOFF)
注:如发动机失效,在达到 1500 英尺或越障高度时才接通发动机引气电门。
Note: In case of engine failure, switch on engine bleed till reaching 1500 feet or obstacle
clearance altitude.
2号发动机引气电门开
No.2 engine bleed switchON
APU 引气电门
APU bleed switchOFF
当机舱爬升率指示器稳定时(when CABIN rate of CLIMB indicator stabilizes):
1号发动机引气电门开
No.1 engine bleed switchON
隔离活门电门自动
Isolation valve switchAUTO
发动机交输起动(ENGINE START USING CROSSBLEED)
使用本程序前,应确保发动机附近区域无人无物。
Verify that the engine is cleared before applying this procedure.
1 发起动完成(No.1 engine start is completed)
发动机引气电门开
Engine bleed switchON
APU 引气电门
APU bleed switchOFF
空调组件电门
Air-conditioning pack switchOFF
隔离活门电门自动
Isolation valve switchAUTO
确保发动机起动所需的引气供应。
Verify bleed supply for engine start.
发动机推力手柄(工作的发动机)前推手柄直到引气管道压力指示 30psi
Engine thrust lever (engine running) advance till bleed duct pressure indicates 30psi
不工作的发动机起动
Engine not running
使用正常的交输引气起动程序。
Apply normal crossbleed start procedure.
起动机脱开后,按需调整两台发动机的推力。
After starter cutoff, adjust thrust of both engines as required.

RVSM 操作的高度显示限制

备用高度表不符合RVSM 空域对高度表的精确度要求。

飞行中使用RVSM 时,机长和副驾驶的高度显示值允许的最大差异为200 英尺。

使用RVSM 时,最大允许地面高度显示差为:

机场标高	机长、副驾驶间	机长或副驾驶的显示和机	
	最大显示差	场标高间的最大差异	
海平面至5,000英尺	50 英尺	75英尺	
5,001 至10,000英尺	60 英尺	75英尺	

高度表差异

高度	CDS/CDS	CDS/备用
海平面	50英尺	50英尺
5,000英尺	50英尺	80英尺
10,000 英尺	60英尺	120英尺
15,000 英尺	70英尺	(参考注释)
20,000 英尺	80英尺	(参考注释)
25,000 英尺	100英尺	(参考注释)
30,000 英尺	120英尺	(参考注释)
35,000 英尺	140英尺	(参考注释)
40,000英尺	160英尺	(参考注释)
41,000 英尺	170英尺	(参考注释)

注:高度在10,000 英尺以上且速度大于0.4 马赫时,位置误差导致容差迅速偏高且直接进行交叉检查变得不能确定。高度在10,000 英尺和29,000 英尺之间,差异超过400 英尺时,应怀疑有错并通过地面维护检查进行核实。高度在29,000 英尺和最大操作高度,差异超过500 英尺时,应怀疑有错并通过地面维护检查进行核实。

若无法确定哪一个高度表的高度指示	是正确时:
------------------	-------

ATC报告

(空白) (BLANK)

RVSM运行紧急程序检查单 海南航空

RVSM运行紧急程序检查单

中国区域:

不能确定航空器高度保持能力/不能保持指定的飞行高度,初始行动

- 1)报告 ATC 具体情况和行动意图;
- 2) 尽可能保持指定的飞行高度,同时评估当时的情况;
- 3) 加强目视和 TCAS 观察空中交通, 打开所有外部灯光警示附近飞机;
- 4) 合适时在当前频率和 121. 5/123. 45 通报航班号、高度、位置和意图等。

只有一个主高度表工作正常

- 1) 交叉检查备用高度表;
- 2) 通知 ATC 目前依靠一个主高度表运行;
- 3) 如不能确定主高度表的精确度,按照全部主高度表失效的程序采取行动。

自动高度控制系统、高度告警系统或所有主高度表失效

- 1) 报告 ATC "由于设备原因不能保持 RVSM", 考虑宣布航空器紧急状态;
- 2) 如果 ATC 提供横向、纵向或常规垂直间隔,应当保持 ATC 指定的高度飞行。
- 3) 如果 ATC 无法配备与其他飞机足够的间隔, 向 ATC 申请离开 RVSM 空域。

严重颠簸/山地波导致约 200 英尺的高度偏差

- 1)报告 ATC "由于颠簸,不能保持 RVSM";
- 2) 要求管制引导指令避开附近高度上的空中交通;
- 3) 如果需要,向ATC申请改变高度。

需要紧急下降或改变高度

- 1)报告 ATC 请求另行配备飞行高度层;
- 2) 当无法与管制员联系时,紧急改变高度层的方法是: 从航空器飞行的方向向右转30度, 并以此航向飞行20公里, 再左转平行原航线上升或者下降到新的高度层, 然后转回原航线。
- 3) 通播警示附近航空器。

ICAO 区域:

飞机不能继续按照 ATC 许可飞行/飞机不能保持空域要求的导航性能精度,又不能获得事先的许可

- A. 当可能时左或右转 90 度离开指定的航路或航迹;
- B. 如果不能保持指定的飞行高度,应尽可能将下降率控制为最小;
- C. 偏置15海里;
- D. 上升或下降到一个与正常使用的高度相差500英尺的飞行高度;
- E. 通播告警附近飞机,利用目视和参考ACAS,观察冲突飞机,打开外部灯光。

飞机需要绕飞危险天气, 又不能得到事先许可

- A. 如可能,偏离开有组织的航迹或航路系统;
- B. 通播告警附近飞机,利用目视和参考ACAS,观察避免冲突,打开外部灯光;
- C. 偏航10海里以内,保持ATC指定的高度;
- D. 偏航超过10海里, 当飞机接近10海里时, 按下表改变高度

向东	左	下降300英尺		
000-179	右	上升300英尺		
向西	左	上升300英尺		
180-359	右	下降300英尺		

F. 偏航回到10海里以内时,回到指定的高度。

RVSM Operation Emergency Procedure Checklist

China Area:

Unable to confirm the altitude maintaining ability of aircraft/unable to maintain cleared altitude, initial actions are:

- 1) Report ATC with detailed information and intention of action;
- 2) Maintain cleared altitude as much as practical, and assess the situation;
- 3) Improve the visual and TCAS observation of air traffic, turn on exterior lights to alert vicinity aircraft;
- 4) Notify the squawking, altitude, position and intention via current frequency and 121.5/123.45 as appropriate.

With only one primary altimeter operating normally

- 1) Cross check standby altimeter;
- 2) Inform ATC currently the operation is based on one primary altimeter;
- 3) Take actions according to "All primary altimeters failure" procedure if the accuracy of primary altimeters can not be confirmed.

Automatic altitude control system, altitude alert system or all primary altimeters failed

- 1) Report ATC "UNABLE RVSM DUE EQUIPMENT", consider to declare emergency of the aircraft.
- 2) If ATC provides lateral and vertical separation, flight and maintain ATC cleared altitude
- 3) If ATC is unable to assign enough separation with other aircraft, request ATC to leave RVSM airspace.

Severe turbulence/mountain wave leads to an altitude deviation of approximately 200ft.

- 1) Report ATC "UNABLE RVSM DUE TURBULENCE";
- 2) Request ATC vector clearance to avoid other air traffic on vicinity altitudes;
- 3) Request ATC to change altitude if necessary.

Emergency or altitude change is required

- 1) Report ATC and request to assign another flight level;
- 2) If unable to contact ATC, The method of changing FL is: right turn 30 degrees from the aircraft current; heading; and proceed with the new heading 20 kilometers, and then left turn to parallel the original route, climb or descend to a new altitude, then return to the original route.
- 3) Alert vicinity aircraft via broadcasting.

ICAO:

When the aircraft can not proceed with ATC clearance/maintain airspace required navigation performance, and unable to obtain a clearance beforehand.

- A. Turn left or right 90 degrees away from assigned route or track when possible.
- G. Minimize the descent rate as much as possible if unable to maintain cleared altitude.
- H. Offset 15 nm.
- I. Climb or descend to an altitude with 500ft difference with normal operation altitude.
- J. Alert vicinity aircraft via broadcasting, observe conflict traffic with visual and reference ACAS, turn on exterior lights.

The aircraft needs to circumnavigate for dangerous weather, but without clearance beforehand

- A. If possible, deviate from the organized track or route system;
- B. Alert vicinity aircraft via broadcasting observe conflict traffic with visual and reference ACAS, turn on exterior lights.
- C. Offset within 10 nm, maintain ATC cleared altitude.
- D. Offset more than 10 nm, change altitude as the following table when the aircraft is close to 10 nm.

Eastbound	Left	Descend 300 ft
000-179	Right	Climb 300 ft
Westbound	Left	Climb 300 ft
180-359	Right	Descend 300 ft

E. When the offset is back within 10 nm, return to assigned altitude.

B737 (300/400/700/800)机型地面除冰/防冰检查单

海南航空

地面除冰/防冰

注意: 请参考 FCOM 手册补充程序 "恶劣天气下飞行" SP16 章节。

地面除冰/防冰操作前检查:

建立与抽面机系	- Л	员的通讯联系并做好准备:

- 安定面配平.......全机头向下 机长(C) 配平飞机到电动机头向下极限,然后继续人工配平到人工机头向下极
- 限。机头全向下位置以防止除冰液和融雪进入安定面平衡腔内堆积。

警告

一旦除冰操作开始,任何飞机的移动或构形改变都必须得到地面机务维护 人员指令。

除冰/防冰操作后检查:

- APU 引气电门......按需 副驾驶(F/O) 在完成除冰后等待约 1 分钟后接通发动机引气电门以确保所有除冰液 都从发动机中清除:
- 发动机引气电门......接通 副驾驶(F/O)

机长根据 ATIS 报告、机组观察判断与机组协商后决定保持时间。

批准人:

- 发动机防冰.......按需 副驾驶(F/O) 在所有地面操作期间,当存在或预计有结冰条件时,发动机防冰装置 必须接通。
- 机翼防冰...........按需 副驾驶(F/O)除非飞机受与批准的地面除冰程序相一致的 II 和 IV 型使用除冰液所保护,在发动机起动与起飞之间,若存在或预计存在结冰条件,在所有地面操作时机翼防冰必须接通。

地面除冰/防冰滑行检查:

● 襟翼按需 副驾驶 (F/O) 如低温条件下滑行时要通过雪水或积水时,或在温度低于零度的降雨情况下滑行时,要将襟翼收起。襟翼放下滑行时主起落架溅起的积雪和雪水会在襟翼和襟翼驱动装置上堆积。前缘装置也容易堆积雪水。

起飞前程序:

- 襟翼.......起飞位置

超过保持时间,根据驾驶舱、客舱和外部检查及起飞前污染检查,确 定能否起飞,要由有资格的地面机务人员协助执行起飞前污染检查。

如果有结冰污染在飞机和机翼,联系当地机务或运行部门,要求再次 执行除冰防冰程序,向 ATC 报告情况,必要时滑回停机位。

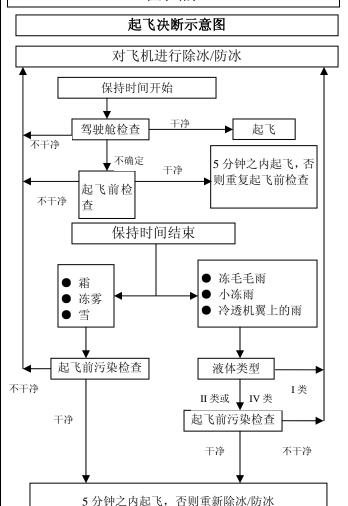

发动机暖机,

- 发动机暖机......按需 机长(C)
- 暖机时间:

I	间隔	推荐 N1	持续时间		
	30 分钟	70%	30 秒		

- 注:如果存在冻雨、雨霁、冻雾或大雪的条件,应该考虑以 10 分钟或 更小的间隔时间增加推力到 70%N1。
- 保持时间.......重新确定或证实如果需要,机组人员根据驾驶舱客舱检查和天气条件的变化来判断,由机长决定。

——程序结束——

6-1 生效日期: 2007/11/22

De-ice and anti-ice on ground checklist for B737 (300/400/700/800)

HNA

De-ice and anti-ice on ground

Note: Refer to FCOM supplementary procedure "Adverse Weather" SP section 16

Check the following before de-ice and anti-ice operation on ground:

Establish communication with ground crew and get prepared:
air/ground communication
establish captain(C), first officer (F/O)
• parking brake set (C)
● flapup (F/O)
• thrust leveridle (C)
stabilizer trim Full APL NOSE DOWN (C)
Trim the airplane to the electrical APL NOSE DOWN limit.
Then continue trimming manually to the manual APL NOSE
DOWN limit. The full nose down position prevents de-icing fluid
and slush run-off form entering the stabilizer balance panel cavity.
• engine and APU bleed air switchoff
packs(both)off

Warning

Once de-ice operation begins, any airplane movement or configuration change must be commanded by ground crew.

Check after de-ice/anti-ice operation:

Check after de-ice/anti-ice operation.
• de-ice and anti-ice reportreceived and recorded
type of fluid
concentration (only for II and IV type fluid)
local time for final applying anti-ice fluid
verify orally: "de-ice and anti-ice check completed"
APU bleed air switchas needed (F/O)
Wait approximate one minute after completion of deicing to
turn engine BLEED air switches on to ensure all deicing fluid has
been cleared from engine.
• Engine bleed air switch on (F/O)
• packs auto (F/O)
• stabilizerUnits (C)
Verify trim has been set to takeoff position.
• holdover timeconfirm
Refer to holdover time on the reverse side of this checklist.

Captain decides holdover time according to ATIS report, crew observation and experience judgement after discussion with crewmembers.

- ground facility....remove
 normal procedure...restart

Check when taxi with de-ice/anti-ice on ground:

Before Takeoff Procedure:

- Flap lever set takeoff flaps ● Stabilizer trim_UNITS (C)

If beyond holdover time, decide whether to take off or not according to cockpit, cabin and exterior inspection and before take off contamination check, which should be assisted by qualified ground crew.

If there is ice contamination on airplane and wing, contact maintenance or flight operation department to ask for another de-ice and anti-ice procedure execution. Report to ATC and taxi back to appron if necessary.

Engine run-up

Interval Recommended N1 Duration

作人:

6-2 effective: 2007/11/22

30minutes

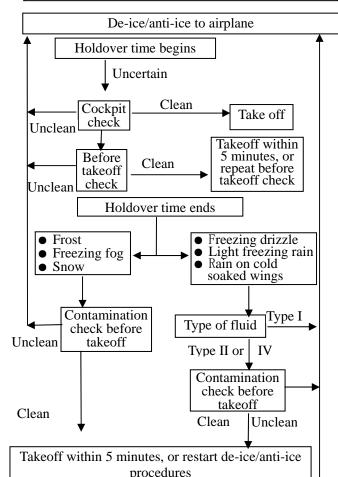

0%

30 seconds

- Note: When operating in conditions of freezing rain, freezing drizzle, freezing fog or heavy snow, additional momentary runups to 70% N1 at intervals of 10 minutes or less should be considered.
- before take off checkexecute
- holdover timereconfirm or verify If required, crewmember should judge according to cockpit and cabin checks and weather condition changes, the final decision should be made by the captain.

End of the procedure

Take off decision schematic diagram

地面除冰防冰程序(300/400/700/800)

海南航空

地面除冰防冰保持时间表

- 地面除冰防冰液不是用来也不提供飞行中的防冰;
- 保持时间随中等到轻微情况而变化,在严重天气情况下保持时间将少于范围内的最低时间;
- 喷气尾流、高风速、高水份含量和飞机蒙皮温度低于外界大气温度将减少保持时间;
- 如果不能正确判断是否冻毛毛雨则使用轻微冻雨的保持时间;
- 在冰粒、雪粒、雪团天气情况下不存在保持时间,起飞前5分钟之内完成在客舱进行的起飞前污染检查;
- 在冰雹或中等到严重冻雨时不要起飞;
- 此表仅用于出发计划且应与除冰防冰检查单一起使用,由机长最后决定保持时间。

I 型除冰液(各种浓度)										
外界大	外界大气温度 各种天气条件下的预期保持时间(分钟)									
摄氏度 (℃)	华氏度 (T)	*霜	冻雾	小雪◆◆	雪◆◆	中雪◆◆	**冻毛毛	小冻雨	落到冷透机 翼上的雨	# 其他
高于一3	高于 27	45	11-17	18-22	11-18	6-11	9-13	2-5	2-5	
-3 至-6	27至21	45	8-13	14-17	8-14	5-8	5-9	2-5	2-3	注意:没有
-6 到-10	21至14	45	6-10	11-13	6-11	4-6	4-7	2-5		保持时间
低于-10	低于 14	45	5-9	7-8	4-7	2-4			_	
Ⅱ 型除冰液										

外界大气温度		Ⅱ型液体浓度	各种天气条件下的预期保持时间(分钟)						
摄氏度 (℃)	华氏度 (T)	纯液/水(体积 %/体积%)	*霜	冻雾	宇	冻毛毛雨 **	小冻雨	冷透机翼 上的雨 ***	# 其他

-14	7	75/25	5	25-50	15-35	****15-30	****10-20				
低于-14 至-25	低于7至 -13	100/0	12	15-40	15-30						
低于-25	低于-13	100/0	IV 型液体可以在低于-25℃ (-13°F)时使用,但液体冰点必须低于外界大气温度至少7°C (13°F) 并且满足飞机的气动力要求。若IV 型液不能使用,考虑使用I 型液。.								

注:

- *适用于飞机有活性霜的情况
- **如果无法判断是否是冻毛毛雨,则使用小冻雨的保持时间
- ***此栏仅用于温度 0 ° C (32 ° F)以上。
- ****在此条件下如果低于-10°C(14°F),没有保持时间。
- #雪盘、雪粒、冰盘、中到大冻雨、冰雹
- ◆◆温度至少为 60° (140°F)的热水或加热过的混合液。除冰表面每平方米至少喷洒1升除冰液。(2 加仑/100 平方英尺)

HOLDOVER TIME GUIDELINES (300/400/700/800)

HOLDOVER TIME GUIDELINES

HNA

de-ice and anti-ice fluid is not used or supplied for anti-ice in flight;

- the holdover time varies with the situation changes from medium to light, and it is less than the minimum time in range
- under severe weather conditions; the holdover time will be reduced in case of the jetstream, high wind speed, high moisture and the temperature of the

the holdover time for light freezing rain should be used if freezing drizzle rain cannot be properly confirmed;

there is no holdover time for ice crystal, snow crystal or snowball weather conditions, and before takeoff contamination check in the cabin should be completed within 5 minutes before takeoff; don't takeoff in hail or medium to severe freezing rain conditions;

holdov	ver time sho	uld be decid	artur ded b	y the ca	aptain.					ti-ice checklist,	and the final	decision for

^{*} Apply only for the active frost conditions.

7-2 effective: 2008/1/11

^{**} Use light freezing rain holdover times if positive identification of freezing drizzle is not possible

^{***}This column is for use at temperatures above 0 degrees Celsius (32 degrees Fahrenheit) only

^{****} No holdover time guidelines exist for this condition below -10 °C (14 °F)

[#] Heavy snow, snow pellets, ice pellets, moderate and heavy freezing rain, hail

^{◆◆}TO USE THESE TIMES, THE FLUID MUST BE HEATED TO A MINIMUM TEMPERATURE OF 60 °C (140 °F) AT THE NOZZLE AND AT LEAST 1 LITER/M2 (≈ 2 GALS/100FT2) MUST BE APPLIED TO DEICED SURFACES SAE

随机文件检查提示(适用于 B737) PAPERS ON BOARD LIST (For B737)

为保证我司飞机的适航性,要求飞行员 在航前检查中,认真检查下列文件及资 料的完整性:

For the airworthiness of Hainan Airlines aircrafts, The pilots are required to check all the following papers available:

- 1、适航证(Airworthiness Certificate)
- 2、国籍登记证(Nationality Certificate)
- 3、电台执照(Radio Licence)
- 4、飞机飞行手册(Airplane Flight Manual)
- 5、使用手册 (中文、二册) (Operations Manual)
- 6、快速检查单 (中文、一册) (Ouick Reference Handbook)
- 7、最低设备放行清单(中文、一册) (Minimum Equipment List)
- 8、机场分析手册 (中文、一册) (Takeoff Analysis Manual)
- 9、飞行运行手册 (中文、一册) (General Manual of Flight Operations)
- 10、运行规范 (中文、一册) (Operations Standards)
- 11、航空保安手册(中文、一册) (Aviation Security Manual)
- 12、简易检查单(一张) (Normal Checklist)
- 13、机组辅助资料(Grew Assistant Data)
- 14、备份平衡图(Standby Balance Chart)

注: 若检查中发现问题,请立即通知技术支援中心。

Note: If there is any problem, please inform Dispatch
